Credit Name: Computer Science 3
Assignment Name: BreakAPlate

Error Log Entry

What error message did you encounter (if any)?
There was no error message for the problem that I encountered
What unexpected behavior did your program exhibit?
An error that I encountered as I was working on my program was that when the user would land on the no plates broken image, the last prize that they would have displayed would show.
What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)
In the program, I never outlined what would happen to the prizes label when theres supposed to be no prize given <-- It more of a logic error from my side
Include a screenshot of specific lines of code.

```
if (newPlay == 3) {
    plates1.setIcon(plates);

}
```

How did you fix the issue?
I needed to set the icon = null --> so that in the label no image will be shown
Provide the corrected code or solution using a screenshot.

```
if (newPlay == 3) {
    plates1.setIcon(plates);
    display.setIcon(null);
    display.setText("You lost :C");
}
```
