Credit Name: Computer Science 3
Assignment Name: Schoolinputer

Error Log Entry

What error message did you encounter (if any)?
There was no error message in the code itself
What unexpected behavior did your program exhibit?
I couldn't find an effective way for the program to get value of the combox boxes without creating endless amount of if statements and variables
What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)
It was a logic error since I didn't know a way to effectively get the inputted option and display it
Include a screenshot of specific lines of code.
I didn't try any other code type becuase I was determined to find a different way to get the selected item
How did you fix the issue?
After asking for help and using my textbook, I noticed a code line String.valueof --> I then tried to configure that to include the selected items of the comboBox
Provide the corrected code or solution using a screenshot.

```
String school = String.valueOf(schooloptions.getSelectedItem());
String Grade = String.valueOf(grade.getSelectedItem());
```
